

Professional-Level Performance

Induction cooking works by using electromagnetic fields to make the metal pot or pan the heating element. The cooktop itself stays cool to the touch, and only the pan gets hot. Induction cooktops also get pots and pans hot 25% faster than gas cooktops, and 60% faster than electric cooktops. And temperature adjustments are instantaneous. It's the number one type of cooktop in Europe. And Siemens is the number one brand of built-in appliances in Europe.

Designed to Be Clean

Innovative touchSlide™ controls mean no knobs to wipe around. And since the cooktop stays cool, spilled foods don't get baked on. Cleanup is simply a matter of wiping the smooth surface clean.

Intelligent Safety

The only way to get burned is by touching a hot pot or pan. You can touch an empty element that's turned to full power and not get burned, even if you're wearing metal rings or bracelets.

European Style in 30" and 36" Models

Siemens 30" and 36" induction cooktops feature low profiles that blend elegantly and seamlessly into countertops.

German Engineering

Every detail of a Siemens avantGarde® cooktop is engineered for long-lasting durability.

The most advanced cooking technology. From the most advanced cooking technology company.

avantGarde® Induction Cooktops

The future moving in.
