FFPS600A

1. Disconnect pull-down spray hose from supply tube.
Important note: Be sure that fiber remains in place in supply tube when reconnecting.
2. Insert faucet body into sink.
3. Mount rubber washer followed by plastic base, if necessary, and metal washer to faucet shank under sink. Mount lock nut to shank and hand-tighten.
4. Be sure the faucet is aligned properly. Make final tightening of lock nut.
5. Reconnect pull-down spray hose to supply tube, being certain that fiber remains in place in supply tube.
6. Connect the supply hoses to the hot and cold water supply valves. Be sure to hold the supply hoses in place when tightening the nut so as not to twist the hoses.
7. Attach weights to hose on spout side of loop, just above bend (use screws provided).
8. Confirm that faucet operating handle is in closed position and open supply valves, check connections for leakage.
9. Disconnect spray head from hose and flush hot and cold water lines until clear to avoid problems with spray head operation. Reconnect spray head, confirming that rubber washer remains in place. Hose will leak if washer are installed incorrectly.

FFPS600B

1. The mixer is operated by moving the handle.
2. Swivel hand to the left for hot water.
3. Swivel hand to the right for cold water. Rotate the handle upward and for volume control pull handle away from faucet.
4. On kitchen faucets:
 - A. The hand spray can be drawn approximately 20 inches out of the arm.
 - B. The flow of the water is changed from bubble to needle spray by pushing down upon the diverter button located on top of the hand spray.
 - C. After the water flow has been shut off, the hand spray automatically reverts back to the bubble spray mode.

Use only clean water or very diluted soapy water with all finishes. Do not use any abrasive cleaners.
