¹ True HEPA filters effectively remove 99.97% of particles from the air that passes through the filter from .03 microns and larger. Overall particle reduction depends on many factors including the amount of air processed, the pollutant type and the pollution introduction rate into the environment. This device is not medical equipment and is not intended to treat or cure any condition or disease.

Sharp does not guarantee that test results can be replicated in actual user situations. Features vary between models and regions. Product specifications and design are subject to change without notice.
