NOTES:

- Cooling capacity based on 80°/67°F evaporator inlet and 95°/75°F condenser air inlet
- Special voltages are available. Consult factory for details/prices.
- Accessories available for fast user-friendly installation. See Accessory Sheets in catalog for complete information.
- Ceiling kit is used to conduct condenser discharge air to drop ceiling ventilated plenum. Kit consists of flange, flex duct and ceiling panel.
- Nozzle kit is used in place of indoor air discharge grille to direct conditioned air to specific spots. Kit consists of drop-in panel with two flex-duct nozzles.
- Pump kit is used in place of standard condensate collection tank to remove condensate from unit. Kit consists of pump, wire harness and hardware.
- Condenser plenum is used to direct a supply of condenser inlet air to the unit from outside the space to be cooled.
- When using a condenser plenum, order additional CK-12 (or 2 CK-12 in the case of model 60's) for conducting condenser inlet air.
- Evaporator plenum is used to direct evaporator return air from a remote location or room to the unit. Flex duct to be supplied separately.
- Discharge duct adapter is used in place of std. evaporator air discharge grille to transform opening to round duct. Flex duct to be supplied separately.
- See separate price list for special order items and convenience items.
