

Installation Instructions

Range

Questions? Call 1.800.GE.CARES (1.800.432.2737) or visit www.GEAppliances.com

IN THE COMMONWEALTH OF MASSACHUSETTS

- This product must be installed by a licensed plumber or gas fitter.

- When using ball type gas shut-off valves, they shall be the T-handle type.
- A flexible gas connector, when used, must not exceed 3 feet.

WARNING

FIRE OR EXPLOSION HAZARD

If the information in this manual is not followed exactly, a fire or explosion may result causing property damage, personal injury or death.

Installation must be performed by a qualified installer.

Read these instructions completely and carefully.

Installation of this range must conform with local codes, or in the absence of local codes, with the National Fuel Gas Code, ANSI Z223.1/NFPA 54, latest edition. In Canada, installation must conform with the current Natural Gas Installation Code, CAN/CGA-B149.1 or the current Propane Installation Code, CAN/CGA-B149.2, and with local codes where applicable. This range has been design-certified by CSA International according to ANSI Z21.1, latest edition and Canadian Gas Association according to CAN/CGA-1.1 latest edition.

When installing a gas appliance the use of old flexible connectors can cause gas leaks and personal injury. Always use a **NEW** flexible connector.

Leak testing of the appliance shall be conducted according to the manufacturer instructions.

The range must be electrically grounded in accordance with local codes or, in the absence of local codes, in accordance with the National Electrical Code (ANSI/NFPA 70, latest edition). In Canada, electrical grounding must be in accordance with the current CSA C22.1 Canadian Electrical Code Part 1 and/or local codes. See Electrical Connections in this section.

Do not install this product with an air curtain hood or other range hood that operates by blowing air down on the cooktop. This airflow may interfere with operation of the gas burners resulting in fire or explosion hazard.

FOR YOUR SAFETY:

WARNING

- A child or adult can tip the range and be killed.
- Install the anti-tip bracket to the wall or floor.
- Engage the range to the anti-tip bracket by sliding the range back such that the foot is engaged.
- Re-engage the anti-tip bracket if the range is moved.
- Failure to do so can result in death or serious burns to children or adults.

Anti-Tip Bracket Kit Included

WARNING Before beginning the installation, switch power off at service panel and lock the service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.

If you did not receive an anti-tip bracket with your purchase, call 1.800.626.8774 to receive one at no cost. (In Canada, call 1.800.561.3344.) For installation instructions of the bracket, visit: www.GEAppliances.com. (In Canada, www.GEAppliances.ca.)

TOOLS YOU WILL NEED

MATERIALS YOU MAY NEED

- Gas line shut-off valve
- Pipe joint sealant or UL-approved pipe thread tape with Teflon* that resists action of natural and LP gases
- Flexible metal appliance connector (1/2" I.D.). A 5-foot length is recommended for ease of installation but other lengths are acceptable. Never use an old connector when installing a new range.
- Flare union adapter for connection to gas supply line (3/4" or 1/2" NPT x 1/2" I.D.)
- Flare union adapter for connection to pressure regulator on range (1/2" NPT x 1/2" I.D.)
- Liquid leak detector or soapy water.

*Teflon: Registered trademark of DuPont

BEFORE YOU BEGIN

IMPORTANT — Save these instructions for local inspector's use.

IMPORTANT — Observe all governing codes and ordinances.

IMPORTANT — Remove all packing material and literature from oven before connecting gas and electrical supply to range.

IMPORTANT — To avoid damage to your cabinets, check with your builder or cabinet supplier to make sure that the materials used will not discolor, delaminate or sustain other damage. This oven has been designed in accordance with the requirements of UL and CSA International and complies with the maximum allowable wood cabinet temperatures of 194°F (90°C).

Note to installer – Be sure to leave these instructions with consumer.

Note to consumer – Keep these instructions for future reference.

Service – The electrical diagram is in an envelope attached to the back of the range.

Proper installation is the responsibility of the installer.

Product failure due to improper installation is not covered under warranty.

Before installing your range on linoleum or any other synthetic floor covering, make sure the floor covering can withstand 180°F without shrinking, warping or discoloring. Do not install the range over carpeting unless a sheet of 1/4" thick plywood or similar insulator is placed between the range and carpeting.

Mobile Home - Additional Installation Requirements

The installation of this range must conform to the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280 (formerly the Federal Standard for Mobile Home Construction and Safety, Title 24, HUD Part 280). When such standard is not applicable, use the Standard for Manufactured Home Installations, ANSI A225.1/NFPA 501A or with local codes.

In Canada, the installation of this range must conform with the current standards CAN/CSA-A240-latest edition, or with local codes.

When this range is installed in a mobile home, it must be secured to the floor during transit. Any method of securing the range is adequate as long as it conforms to the standards listed above.

DIMENSIONS AND CLEARANCES

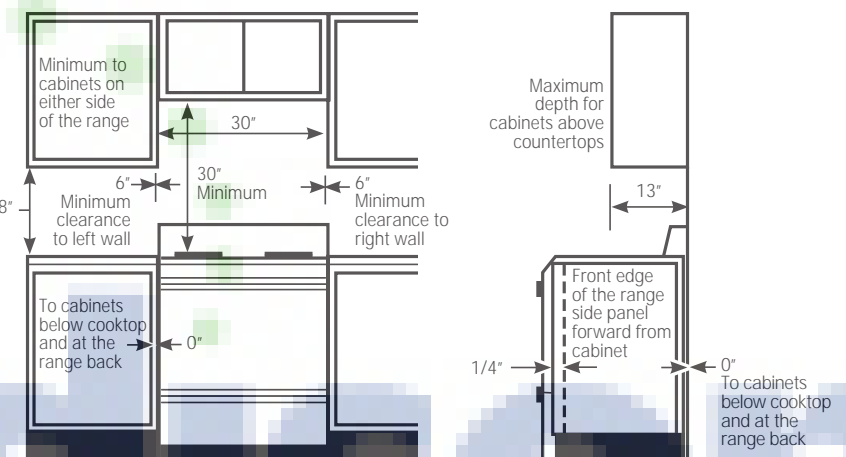

Provide adequate clearances between the range and adjacent combustible surfaces. These dimensions must be met for safe use of your range.

Allow 30" (76.2 cm) minimum clearance between burners and bottom of unprotected wood or metal cabinet, or allow a 24" (61 cm) minimum when bottom of wood or metal cabinet is protected by no less than 1/4" (6.4 mm) thick flame-retardant millboard covered with no less

than No. 28 MSG sheet metal (.015" [38 mm] thick), .015" (38 mm) thick stainless steel, .025" (0.64 mm) aluminum or .020" (0.5 mm) copper.

Installation of a listed microwave oven or cooking appliance over the cooktop shall conform to the installation instructions packed with that appliance.

For island installation, maintain 2-1/2" minimum from cutout to back edge of countertop and 3" minimum from cutout to side edges of countertop.

DIMENSIONS AND CLEARANCES (CONT.)

GAS PIPE AND ELECTRICAL OUTLET LOCATIONS

Recommended area for 120V outlet on rear wall and area for through-the-wall connection of pipe stub and shut-off valve.

Recommended area for through-the-floor connection of pipe stub and shut-off valve.

CAUTION To prevent drafts from affecting burner operation, seal all openings in floor under appliance and behind appliance wall.

CONVERTING TO LP GAS (OR CONVERTING BACK TO NATURAL GAS FROM LP)

This range leaves the factory set for use with natural gas. If you want to convert to LP gas, the conversion must be performed by a qualified LP gas installer.

The conversion orifices and instructions can be found on back of the range.

Keep these instructions and all orifices in case you want to convert back to natural gas.

1 GAS SUPPLY

WARNING Fire Hazard: Do not use a flame to check for gas leaks.

WARNING Explosion Hazard: Do not exceed 25 ft-lbs of torque when making gas line connections. Overtightening may crack the pressure regulator resulting in fire or explosion hazard.

Gas Pressure Regulator
You must use the gas pressure regulator supplied with this range. For proper operation the inlet pressure to the regulator should be as follows:

Natural Gas:
Minimum pressure: 6" of Water Column
Maximum pressure: 13" of Water Column

LP Gas:
Minimum pressure: 11" of Water Column
Maximum pressure: 13" of Water Column

If you are not sure about the inlet pressure contact local gas supplier.

Shut off the main gas supply valve before disconnecting the old range and leave it off until the new hook-up has been completed. Don't forget to relight the pilot on other gas appliances when you turn the gas back on.

Because hard piping restricts movement of the range, the use of a CSA International-certified flexible metal appliance connector is recommended unless local codes require a hard-piped connection.

If the hard piping method is used, you must carefully align the pipe; the range cannot be moved after the connection is made.

To prevent gas leaks, put pipe joint compound on, or wrap pipe thread tape with Teflon* around, all male (external) pipe threads.

- Install a manual shut-off valve in the gas line in an easily accessed location outside of the range. Make sure everyone operating the range knows where and how to shut off the gas supply to the range.
- Install male 1/2" flare union adapter to the 1/2" NPT internal thread at inlet of regulator. Use a backup wrench on the regulator fitting to avoid damage.
- Install male 1/2" or 3/4" flare union adapter to the NPT internal thread of the manual shut-off valve, taking care to back-up the shut-off valve to keep it from turning.
- Connect flexible metal appliance connector to the adapter on the range. Position range to permit connection at the shut-off valve.
- When all connections have been made, make sure all range controls are in the off position and turn on the main gas supply valve. Use a liquid leak detector at all joints and connections to check for leaks in the system.

When using pressures greater than 1/2 psig to pressure test the gas supply system of the residence, disconnect the range and individual shut-off valve from the gas supply piping. When using pressures of 1/2 psig or less to pressure test the gas supply system, simply isolate the range from the gas supply system by closing the individual shut-off valve.

When checking for proper operation of the regulator, the inlet pressure must be at least 1" greater than the operating (manifold) pressure as given on rating label of product.

*Teflon: Registered trademark of DuPont

CONNECTOR HOOKUP

2 ELECTRICAL CONNECTIONS

WARNING Shock Hazard: This appliance must be properly grounded. Failure to do so can result in electric shock.

Electrical Requirements - 120-volt, 60 Hertz, properly grounded dedicated circuit protected by a 15-amp or 20-amp circuit breaker or time delay fuse.

Note: Use of automatic, wireless, or wired external switches that shut off power to the appliance are not recommended for this product.

Grounding
The power cord of this appliance is equipped with a three-prong (grounding) plug which plugs into a standard three-prong grounding wall receptacle to minimize the possibility of electric shock hazard from this appliance.

The customer should have the wall receptacle and circuit checked by a qualified electrician to make sure the receptacle is properly grounded.

Where a standard two-prong wall receptacle is encountered, it is the personal responsibility and obligation of the customer to have it replaced with a properly grounded three-prong wall receptacle.

DO NOT, UNDER ANY CIRCUMSTANCES, CUT OR REMOVE THE THIRD (GROUND) PRONG FROM THE POWER CORD. DO NOT USE AN ADAPTER. DO NOT USE AN EXTENSION CORD.

Ground Fault Circuit Interrupters (GFCI's) are not required or recommended for gas range receptacles. Performance of the range will not be affected if operated on a GFCI-protected circuit but occasional nuisance tripping of the GFCI breaker is possible.

3 SURFACE BURNERS

WARNING Fire or Explosion Hazard: Do not operate the burner without all burner parts in place.

- Burners** - Place surface burners into corresponding positions on cooktop.
- Caps** - Place caps on proper size burner.
- Continuous Grates** - Place the left and right grates on the cooktop. These grates are marked "LEFT" and "RIGHT" on their undersides. Place the center grate with its short edge toward the front of the range.

4 CHECK SURFACE BURNERS

Push and turn knob to LITE position. You will hear a clicking sound indicating proper operation of the spark module. Once the air has been purged from the supply lines, burners should light within 4 seconds. After burner lights, rotate knob out of the LITE position. Try each burner in succession until all burners have been checked.

Quality of Flames
The flame quality of the burners needs to be determined visually.

If burner flames look like (A), call for service. Normal burner flames should look like (B) or (C), depending on the type of gas you use.

With LP gas, some yellow tipping on outer cones is normal.

5 CHECK BAKE AND BROIL BURNERS

- To remove the oven bottom:**
A. Remove the screws holding down rear of the oven bottom.
B. Grasp the oven bottom at rear slots on each side.
C. Lift the rear of the oven bottom and slide it back until it clears the lip of the range frame at the front. Then lift bottom up and out.

- Set Bake function to 350°F. Burner should light in 30 to 90 seconds.
- Check Flame Quality.**
 - Flames should have approximately 1" blue cones.
 - Natural gas should burn with no yellow flames.
 - LP gas flames have slight yellow tips
 - After warming up, the flame should not lift off the burner.
- Check broil burner using the same method as the bake burner.**

6 ADJUST BAKE BURNER AIR SHUTTER IF NECESSARY

To adjust the flow of air to the bake burner, loosen the Phillips head screw and rotate the shutter as needed.

- If the flames are yellow, open shutter more than the original setting.
 - If the flames lift off the burner, close the air shutter more than the original setting.
- Check flames again and adjust further if necessary. Replace oven bottom.
- The dual broil burner air shutter is **NOT** adjustable.

7 INSTALL CORNER TRIM KIT (OPTIONAL)

The corner trim kit is intended to fill in the side space in installations without an upsweep countertop. Refer to installation instructions included with kit.

8 INSTALL AND CHECK ANTI-TIP DEVICE

WARNING Never completely remove the leveling leg as the range will not be secured to the anti-tip device properly.

Follow instructions supplied with ANTI-TIP bracket

9 SLIDE RANGE INTO OPENING

- Position the range in front of the cabinet opening. Measure from the floor to the top of the countertop at the rear of the cabinet near the anti-tip bracket. If necessary, adjust the unit by carefully screwing in or out the leveling legs until the cooktop overhang matches the countertop height at the rear (There will not be access to the rear leveling legs once installed).
- Push while lifting the range into the opening until the range is within 2" (5.1 cm) of engaging the anti-tip bracket.
- Plug the range cord into the receptacle. Locate the flexible gas line in back of the range in a manner that it will not touch or be moved by the drawer (if provided). Carefully push the range into the opening until the unit is fully seated in the cabinet. There will be approximately a 1/4" gap between the unit and back wall.
- Carefully screw in the front two leveling legs until the cooktop overhang touches the countertop.
- Look under the unit and verify that the rear leg is fully engaged with the anti-tip device. If not, remove the unit and adjust the height of the rear leg so that it is properly engaged.

WHEN ALL HOOKUPS ARE COMPLETED

Make sure all controls are left in the off position. Make sure the flow of combustion and ventilation air to the range is unobstructed.

Check that all packing materials and tape have been removed. This will include tape on metal panel under control knobs (if applicable), adhesive tape, wire ties, cardboard and protective plastic. Failure to remove these materials could result in damage to the appliance once the appliance has been turned on and surfaces have heated.

Instrucciones de Instalación Cocina

Ante cualquier duda, llame al 1.800-GE-CARES o visite nuestro sitio web en: GEAppliances.com

En el Commonwealth de Massachusetts

- Este producto debe ser instalado por un plomero licenciado o un mecánico gasista.

- Al usar válvulas de cierre de gas tipo balón, deberán ser del tipo de manija T.
- Al usar un conector de gas flexible no deberá exceder los 3 pies.

de Canadá) CAN/CGA-1.1 última edición.

Al instalar un electrodoméstico a gas, el uso de conectores flexibles viejos puede ocasionar pérdidas y lesiones personales. Siempre use un conector flexible NUEVO.

La prueba de goteras del electrodoméstico se deberá realizar de acuerdo con las instrucciones del fabricante.

La cocina deberá estar correctamente conectada a tierra de acuerdo con los códigos y ordenanzas locales o, en ausencia de códigos locales, de acuerdo con el Código Nacional de Electricidad (National Electric Code), (ANSI/NFPA NO. 70, última edición). En Canadá, la conexión a tierra se deberá realizar de acuerdo con la Parte 1 del Código de Electricidad de Canadá CSA C22.1 y/o los códigos locales. En esta sección, consulte las Conexiones Eléctricas.

No instale este producto con una campana con cortina de aire u otra campana de cocina que funcione llevando aire a la placa de cocción. El flujo de aire podrá interferir en el funcionamiento de los quemadores de gas, produciendo riesgos de incendio o explosión.

HERRAMIENTAS NECESARIAS

MATERIALES NECESARIOS

- Válvula de cierre para tubería de gas
 - Sellador para junta de tubería o UL - cinta para tubería aprobada con Teflón® resistente a la acción de gases naturales o LP
 - Conector para artefacto metálico flexible (1/2" I.D.) Se recomienda una longitud de 5 pies para una fácil instalación, pero otras longitudes son aceptables. Nunca use un conector viejo al instalar una cocina nueva.
 - Adaptador para unión cónica para la conexión al suministro de gas (3/4" o 1/2" NPT x 1/2" I.D.)
 - Adaptador para unión cónica para la conexión al regulador de presión en la cocina (1/2" o 1/2" NPT x 1/2" I.D.)
 - Detector de pérdida de líquido o agua con jabón.
- *Teflón: Marca registrada por DuPont

ANTES DE COMENZAR

IMPORTANTE — Conserve estas instrucciones para uso del inspector de electricidad local.

IMPORTANTE — Cumpla con todos los códigos y ordenanzas gubernamentales.

IMPORTANTE — Retire todo el material de embalaje y material escrito del horno antes de conectar el gas y el suministro de corriente a la cocina.

IMPORTANTE — A fin de evitar daños en los gabinetes, controle con su constructor o proveedor de gabinetes que los materiales usados no descolorarán, deslaminarán ni sostendrán otro daño. Este horno fue diseñado para cumplir con los requisitos de UL y CSA International y cumple con las temperaturas máximas permitidas para gabinetes de madera de 194° F (90° C).

Nota para el Instalador – Asegúrese de que estas instrucciones queden en manos del comprador.

Nota para el Consumidor – Guarde estas instrucciones para referencia futura.

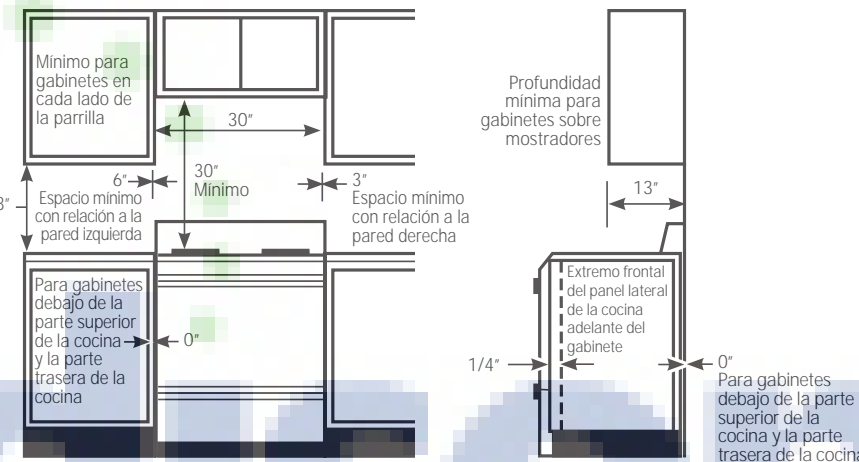

Servicio Técnico — El diagrama eléctrico se encuentra en un sobre adjunto al reverso de la cocina.

La correcta instalación del producto es responsabilidad del instalador.

DIMENSIONES Y ESPACIOS

Deje el espacio adecuado entre la cocina y las superficies combustibles adyacentes. Estas dimensiones se deberán cumplir para un uso seguro de su cocina.

Deje un espacio mínimo de 30" (76.2 cm) entre los quemadores y la parte inferior del gabinete de madera o metal sin protección, o deje un espacio mínimo de 24" (61 cm) cuando la parte inferior del gabinete de madera o metal esté protegido por no menos de 1/4" (6.4 mm) de cartón de retardo de incendios cubierta por no menos que una lámina metálica de 28 MSG (0.15" (3.8 mm)

1 SUMINISTRO DE GAS

ADVERTENCIA Riesgo de incendio: No use una llama para controlar las pérdidas de gas.

ADVERTENCIA Riesgo de Explosión: No supere una torsión máxima de 25 pies-libras al realizar conexiones de tuberías de gas. Cualquier ajuste en exceso podrá romper el regulador de presión, resultando en riesgo de incendio o explosión.

Regulador de Presión de Gas

Se deberá usar el regulador de presión de gas suministrado con esta cocina. Para un funcionamiento adecuado, la presión de entrada al regulador deberá ser la siguiente:

Gas Natural:
Presión mínima: Columna de Agua de 6"
Presión máxima: Columna de Agua de 13"

Gas LP:
Presión mínima: Columna de Agua de 11"
Presión máxima: Columna de Agua de 13"

Si no está seguro sobre cuál es la presión de entrada, comuníquese con el proveedor de gas local.

Cierre la válvula principal de suministro de gas antes de desconectar su vieja cocina y deje la misma apagada hasta que la nueva conexión se haya completado. No olvide volver a encender el piloto en otros electrodomésticos a gas cuando vuelva a encender el gas.

Debido a que las tuberías duras restringen el movimiento de la cocina, se recomienda el uso del conector para electrodomésticos de metal flexible con certificación internacional de CSA, a menos que los códigos locales requieran una conexión de tubería dura. Si se usa el método de tubería dura, deberá alinearse la misma con cuidado; la cocina no se podrá mover una vez realizada la conexión.

CONEXIÓN DEL CONECTOR

Instalador: Informe al consumidor sobre la ubicación de la válvula de cierre de gas.

2 CONEXIONES ELÉCTRICAS

ADVERTENCIA Riesgo de Descarga: Este electrodoméstico deberá estar conectado a tierra de forma adecuada. Si no cumple con esto se podrán producir descargas eléctricas.

Requisitos Eléctricos - Circuito específico de 120 voltios, 60 Hertz, correctamente conectado a tierra por un disyuntor de 15 o 20 amperes o fusible de retraso.

Nota: No se recomienda para este producto el uso de interruptores automáticos, inalámbricos o con cableado externo que apagan la corriente del electrodoméstico.

Conexión a Tierra

El cable de corriente de este electrodoméstico cuenta con un enchufe de 3 patas (conexión a tierra) que se conecta a un tomacorriente de pared estándar de 3 cables para minimizar la posibilidad de riesgos de descargas eléctricas por parte del mismo.

El cliente deberá contratar a un electricista calificado para que controle el circuito, a

fin de asegurar que el tomacorriente esté correctamente conectado a tierra.

En caso de contar con un tomacorriente de pared de 2 cables, es la responsabilidad y obligación del cliente reemplazarlo por un tomacorriente de pared de 3 cables correctamente conectado a tierra.

NUNCA, BAJO NINGUNA CIRCUNSTANCIA, CORTE NI ELIMINE EL TERCER CABLE (TIERRA) DEL CABLE DE CORRIENTE. NO USE UN ADAPTADOR. NO USE UN PROLONGADOR.

No se requieren ni se recomiendan Interruptores con Detección de Falla a Tierra (GFCI) en receptáculos de cocinas a gas. El funcionamiento de la cocina no se verá afectado si se utiliza en un circuito GFCI protegido, pero es posible que se produzcan detenciones ocasionales no deseadas del interruptor GFCI.

3 SUPERFICIALES UEMADORES

ADVERTENCIA Riesgo de Incendio o Explosión: No use el quemador sin que todas las partes de los quemadores estén en sus respectivos lugares.

- Quemadores** - Coloque las cabezas de los quemadores en las posiciones correspondientes en la placa de cocción.
- Tapas** - Coloque las tapas en los quemadores de los tamaños correspondientes.
- Rejillas Continuas** - Coloque las rejillas izquierda y derecha sobre la placa de cocción. Estas rejillas poseen las marcas "IZQUIERDA" y "DERECHA" en sus partes inferiores. Coloque la rejilla intermedia con el extremo corto hacia el frente de la parrilla.

4 CONTROLE LAS CABEZAS DE LOS QUEMADORES

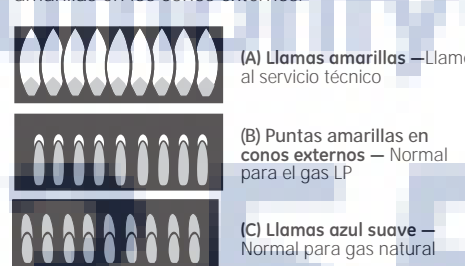

Presione y gire la perilla a la posición LITE (Luz). Escuchará un sonido de clic, que indica el funcionamiento adecuado del módulo de chispeo. Una vez que el aire se haya purgado de las líneas de suministro, los quemadores se deberán encender dentro de los 4 segundos. Luego de que los quemadores se iluminen, gire la perilla fuera de la posición LITE. Pruebe cada quemador de forma sucesiva hasta que todos los quemadores hayan sido controlados.

Calidad de las Llamas

La calidad de las llamas de los quemadores se deberá determinar visualmente.

Si las llamas del quemador se ven como en (A), llame al servicio técnico. El aspecto de la llama normal se ve como en (B) o (C), dependiendo del tipo de gas que use.

Con gas LP, es normal que haya algunas puntas amarillas en las conos externos.

5 CONTROLE LOS QUEMADORES PARA HONEAR Y ASAR

- Para retirar la parte inferior del horno:**
A. Retire los tornillos que sostienen la parte trasera del fondo del horno.
- B. Tome el fondo del horno de las ranuras para los dedos a cada lado.
- C. Levante la parte trasera del fondo del horno y deslice la misma hacia atrás hasta que se despeje el borde de la estructura de la cocina en la parte frontal. Luego levante la parte trasera hacia arriba y afuera.

■ Configure la función Bake (Hornear) en 350° F. El quemador se deberá iluminar entre 30 y 90 segundos.

■ Controle la Calidad de la Llama.

- Las llamas deberían tener conos azules de aproximadamente 1 pulgada.
- El gas natural se debería quemar sin llamas amarilladas.
- Las llamas de gas LP poseen puntas levemente amarilladas.
- Luego de calentar, la llama no debería levantar el quemador.

■ Controle el quemador para asar usando el mismo método que con el quemador para hornear.

6 SI ES NECESARIO, AJUSTE EL OBTURADOR DE AIRE PARA HONEAR Y ASAR

Para ajustar el flujo de aire de cada quemador, afloje el tornillo con cabeza Phillips y gire el obturador según sea necesario.

- A. Si las llamas están amarilladas, abra el obturador más que su configuración de apertura original.
- B. Si las llamas levantan el quemador, cierre el obturador de aire más que su configuración de cierre original.

Controle las llamas nuevamente y ajuste más, de ser necesario. Reemplace la parte inferior del horno.

DIMENSIONES Y ESPACIOS (CONT.) UBICACIONES DE LA TUBERÍA DE GAS Y DEL TOMACORRIENTE ELÉCTRICO

Área recomendada para tomacorriente de 120V en la pared trasera y área para la conexión del tubo de escape y la válvula de seguridad a través de la pared.

Área recomendada para conexión a través del piso del tubo de escape y la válvula de seguridad.

PRECAUCIÓN Para evitar que una corriente de aire afecte el funcionamiento del quemador, selle todas las aberturas sobre el piso debajo del electrodoméstico y detrás de la pared del mismo.

CONVERTIR A GAS LP (O VOLVER A CONVERTIR DE LP A GAS NATURAL)

Esta cocina deja la configuración de fábrica para uso con gas natural. Si desea convertir a gas LP, la conversión deberá ser realizada por un instalador de gas LP calificado.

Los orificios de conversión y las instrucciones se podrán encontrar en la parte trasera de la cocina.

Cuarde estas instrucciones y todo orificio en caso de que lo desee convertir nuevamente a gas natural.
