

# THE PERFECT "MATCH" TO LIGHT UP YOUR OUTDOOR KITCHEN

*Vent-A-Hood*®

VENT-A-HOOD® PRODUCTS ARE SUITABLE FOR USE IN COVERED OUTDOOR APPLICATIONS  
WHEN INSTALLED IN A GFCI PROTECTED BRANCH CIRCUIT

## OUTDOOR KITCHEN PLANNING TIPS

PROPERLY SPECIFIED AND INSTALLED, A VENT-A-HOOD® RANGE HOOD OR LINER INSERT CAN ADEQUATELY HANDLE MOST OUTDOOR APPLICATIONS.\* CONSIDER THE FOLLOWING RECOMMENDATIONS WHEN PLANNING YOUR OUTDOOR KITCHEN:

- Oversize the range hood or liner insert. 6" on each side is recommended, 3" on each side should be considered at minimum
- The range hood or liner insert is recommended to be directly over the grill (back to front). To accomplish this, build the unit out from the wall or make the unit deeper
- The depth of the range hood or liner insert is recommended to extend out at least to the front edge of the cooking surface
- The maximum recommended mounting height over outdoor cooking equipment is 27" above the cooking surface. Exceeding recommended mounting height may compromise performance
- Use the information on Page 4 of the Vent-A-Hood® full line brochure to properly specify the appropriate Magic Lung® blower(s) for the application. When in doubt, increase the blower capacity of the range hood or liner insert (subject to space constraints within the unit). Remote blower systems are also available upon request
- Follow Vent-A-Hood®'s ducting recommendations. Improperly installed duct work is the most common cause of performance problems

**Remember:**

- When opening lids on grills, "burp" the lid a few times before fully opening. The shape of grill lids may greatly compromise the range hood or liner insert's ability to properly capture cooking vapors
- Clean blower housing(s) frequently to minimize grease build up
- Remove back draft dampers from blower housing(s) to increase air flow

\*DUE TO THE WIDE VARIABILITY OF CLIMATE CONDITIONS ASSOCIATED WITH THE INSTALLATION OF OUTDOOR COOKING EQUIPMENT, THE VENT-A-HOOD® PERFORMANCE GUARANTEE IS NOT APPLICABLE.
