Removing Knobs / Installing Knobs

1. Begin by removing the knobs from the kit. Sort the knobs according to knob type based on their graphics – i.e. surface burner knobs, oven control knobs, grid-
dle, grill, if applicable.

2. Before removing the current knobs, line up the new knobs from the kit across the top of the landing ledge of range or rangetop. Match the graphics of the new knobs with the graphics of the current knobs. In most cases, all knobs will not be used. This will help eliminate confusion and will help to assure the knobs are replaced correctly.

MAKE SURE KNOBS POINT TO THE “OFF” POSITION BEFORE REMOVING.

3. **Important** - When removing the knobs from the product, grip the knob securely and pull straight back. It is important to pull the knob straight back so as not to break or bend the valve stem.

4. **Important** - In almost all installation cases there should be extra knobs after all knobs have been changed out on the product. It is recommended to keep these extra knobs in the event that one is needed at a later date.
