

PLASMA MADE[®]

breathe better, live better.

Superior Air Filtration

PlasmaMade[®] E-Filters go beyond regular filters. They don't just trap smoke and cooking odors — they also help remove allergens, bacteria, viruses, and tiny dust particles from the air. Using advanced plasma technology, the filter actually neutralizes harmful pollutants instead of just holding onto them. The result is fresher, healthier air for you and your family to breathe.

WHY BUY

Simple, Hassle-Free Installation

No complex setup, no specialized tools, installs in just minutes. PlasmaMade[®] E-Filters are plug-and-play solutions that can be installed directly into most existing ventilation hoods or downdraft systems. Eliminating the need for external ductwork makes it ideal for any home where venting isn't possible.

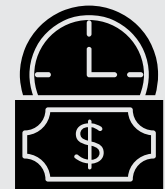

Versatile Compatibility

PlasmaMade[®] E-Filters are designed to fit all major brands of existing ventilation hoods or downdraft units, eliminating the need for retrofitting. Two different models allow for multiple configurations to accommodate round or rectangular ducting. That means you get high-performance air purification without the hassle or expense of a full renovation.

Long-Term Investment

The PlasmaMade[®] E-Filters are a smart investment that saves you money over time. With a lifespan of 10-15 years, and minimal maintenance required, they eliminate the need for costly replacement carbon filters. Energy-efficient operation keeps bills low while improving indoor air quality, making PlasmaMade[®] an economic choice for a cleaner, healthier home. 97% of each E-Filter is able to be recycled with their recycle program.

Patented Technology

The PlasmaMade[®] E-Filter uses patented plasma technology to actively neutralize odors, smoke, grease, and allergens instead of just trapping them. It transforms these particles into harmless clean air, keeping your kitchen fresh and healthy. Best of all, the filter regenerates itself, so you never have to buy costly replacements.
