

Introducing the Dyson Small Ball Multi Floor

Key differences between the Dyson Ball Compact and the Dyson Small Ball

dyson ball compact

DC50

Performance of a full-sized upright.

2 Tier Radial™ cyclones
19 cyclones, arranged across two tiers, work in parallel to increase airflow and capture fine dust.

Instant release wand
Hose and wand release in one action.

Latest Ball™ technology
For easier steering around obstacles and into difficult places.

Advanced cleaner head technology
Self-adjusts for optimal contact on all floor types. Carbon fiber filaments remove fine dust from hard floors.

dyson small ball

The most powerful suction of any lightweight vacuum.

2 Tier Radial™ cyclones
19 cyclones, arranged across two tiers, work in parallel to increase airflow and capture fine dust.

45% longer reach
Cable, wand and hose extend to 42ft, 45% longer than DC50.

30% less noise generated
Acoustically engineered core components absorb motor noise and increase airflow efficiency – reducing sound levels.

Advanced cleaner head technology
Self-adjusts for optimal contact on all floor types. Carbon fiber filaments remove fine dust from hard floors.

Reversible wand
Re-engineered for improved machine stability when not in use. Extends up to 9.8ft for high reach cleaning and accessing tight spaces.

Latest Ball™ technology
For easier steering around obstacles and into difficult places.

Instant recline body
The first Dyson vacuum with a magnetic catch. Just lightly pull the handle and go.

Reconfigured brush bar (US)
New carbon fiber filament and nylon bristle arrangement for improved reliability.
